

Real-Time Call Center Visualization

Unity Dashboard is an essential tool for providing real-time visibility of queue conditions across the Call Center. Suitable for Call Centers of any size, Unity Dashboard provides the flexibility to display your key call handling metrics.

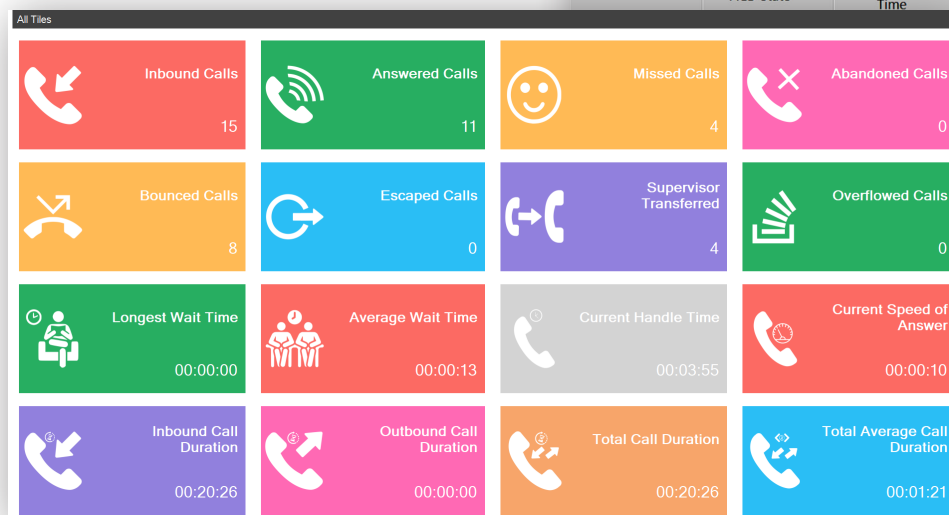

Unity Dashboard helps makes sense of busy call centre environments, providing all users with a clear, concise understanding of current queue conditions. Featuring key performance indicators such as Service Level, Agents Available and Abandoned Calls, Unity Dashboard imparts real-time business intelligence for a wide range of customer handling environments.

Graphical View

As a completely configurable application, Unity Dashboard can display any number of queues and statistics giving you total control. Configurable parameters, with a clean and elegant interface, allows users to quickly understand the condition of the Call Centers quickly so that they can act accordingly.

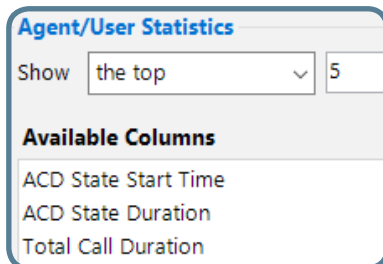

Available in Tabular and Graphical options, Unity Dashboard includes the following statistics: Calls In Queue, Longest Wait Time, Average Wait Time, Missed Calls, Received Calls and Answered Calls. All statistics can be applied to all Call Centers and Agents with the ability to set thresholds against them.

Agent Gamification

Encourage self-management and competition among Agents with Dashboard as the leader board.

Inbound & Outbound

Combine ACD and outbound stats for customers that utilize a blended Agent workload.

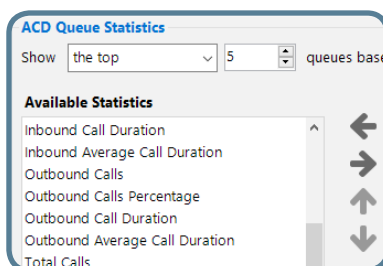

Thresholds & Alerts

All statistics can be configured with colour based alerts, graphically highlighting problems for immediate attention.
